Indore, Madhya Pradesh, India

Summary

Software Engineer with hands-on production experience building scalable, user-centric web applications using React.js, Node.js, and REST APIs, and expanding into agentic AI and LLM-driven automation. Proven ability to resolve critical production issues, architect reusable component systems, and deliver optimized full stack solutions in fast-paced Agile environments. Designed and built an autonomous QA Agent (Python, Claude Code-assisted) that dynamically automates test case execution from natural-language instructions and generates structured pass/fail reports, alongside AI-powered Python automation workflows that reduce manual overhead. Passionate about building accessible, performant web experiences at the intersection of modern frontend engineering, agentic AI, and cloud-native development.

Technical Skills

Languages: JavaScript, HTML5, CSS3, C, C++, Deluge

Frontend: React.js, Tailwind CSS, Material-UI, Responsive Design, UI/UX Optimization, Wireframing, Mobile-First Design, Performance Optimization, Cross-Browser Compatibility

Backend: REST APIs, API Integration, Postman, Node.js, Express.js

Databases: MongoDB, Google Sheets Integration

AI & Automation: Agentic AI Development, Claude Code, ChatGPT, Prompt Engineering, Dynamic NLP-driven QA Agent Design, LLM-based Test Automation, Python Scripting (AI-assisted), Workflow Automation

QA & Test Automation: Python, Playwright, OmniParser, UI & Mobile Automation, Test Case Execution Scripting, Automated PDF Test Reporting

Tools & Platforms: Git, GitHub, GitHub Actions, Vercel, Zoho Creator, AWS (Cloud Fundamentals)

Professional Experience

MERN Stack Developer

DevQAExpert Solution Private Limited

September 2025 – Present

Indore, India

- Designed and built an autonomous QA Agent in Python (Claude Code-assisted) with fully dynamic, natural-language input — users authenticate via API key and can request test case automation directly, or supply a user story/spec file for the agent to convert into executable tests.
- Automated end-to-end test execution and reporting by having the QA Agent run generated test cases and compile results into structured PDF reports summarizing total, passed, and failed test counts, removing manual test-tracking effort.
- Built UI and mobile automation workflows using Python, Playwright, and OmniParser, authoring test case execution scripts to extend QA coverage beyond the agent-driven flow.
- Resolved 15+ production tickets spanning React UI bugs, REST API integrations, and MongoDB data issues, maintaining 99% application uptime across live environments.
- Architected and delivered reusable React component libraries, improving modularity and reducing feature development time by 30%.
- Built and maintained CI/CD workflows using GitHub Actions, streamlining deployment cycles and reducing manual release effort.
- Designed and integrated AI-powered Python automation scripts using Claude and ChatGPT to handle workflow updates, process modifications, and production-level fixes — reducing resolution time significantly.
- Collaborated cross-functionally with engineers and product stakeholders across the full software development lifecycle including planning, development, testing, deployment, and monitoring.
- Enhanced codebase maintainability and debugging speed through AI-assisted development practices, prompt engineering for agent design, and structured documentation.

Zoho Creator Developer Intern

Varthak Technologies (Zoho)

February 2025 – March 2025

Bengaluru, India

- Designed cloud-based business applications with focus on clean UI layouts and workflow usability.
- Built interactive dashboards and optimized user flows, reducing task completion time by 40%.
- Improved visual data presentation for better stakeholder decision-making.

Projects

SunandSonsFood – Client-Based Business Website

November 2025

React.js, Tailwind CSS, Google Apps Script

- Delivered zero-maintenance, cost-efficient business website with automated lead handling and real-time client notifications.
- Integrated form submissions with Google Sheets, automatic email notifications, and WhatsApp direct chat for instant lead capture.
- Eliminated server deployment costs through Google Apps Script backend, achieving zero hosting expenses.
- Implemented SweetAlert-based UX for success/error handling and mobile-first responsive design for target audience.

PlanMyDay – Indian Wedding Planning Platform

October 2025 – Present

React.js, JavaScript, Tailwind CSS, HTML5, CSS3

- Built scalable wedding planning platform with vendor listings (venues, decor, catering), budget tracking, and checklist workflows.
- Designed and developed reusable React components with modular architecture for category-wise browsing and planning utilities.
- Implemented fully responsive UI optimized for mobile users with interactive user experience and visual components.
- Created structured planning tools to simplify Indian wedding management in a single integrated platform.

Portfolio Website

2025

React, Tailwind CSS, Vercel | [Live Link](#)

- Created personal portfolio showcasing projects with modern design, animations, and optimized performance.
- Achieved 95+ Lighthouse score across all metrics through code splitting and lazy loading.

Education

Master of Computer Applications (MCA)

August 2023 – June 2025

Sage University

Indore, India
